

LITE PAPER

INTRO

Founded by long-term cryptocurrency investors, Rocket Fund has been strategically designed to solve many of the problems that current masternode projects face. With 10% of all rewards allocated to a development fund, Rocket Fund ensures stability and support for future growth—a clear differentiation of structure that will benefit the savvy investor.

WHAT IS A MASTERNODE?

A masternode is a server on a decentralized network that has increased capabilities compared to ordinary nodes. Masternodes require an investment in order to run, and operators earn through incentives on their holdings. The specific incentives and the frequency of distribution vary in different cryptocurrencies. An initial coin investment is needed, in addition to a VPS or server for 24/7 hosting, a dedicated IP address, and storage space.

CURRENT PROBLEMS MASTERNODE PROJECTS ARE FACING

Masternode projects have frustrated and disappointed many operators, and rewards have been elusive. In general, these problems include constant price decreases, the result of oversupply that outstrips demand or the inflation of coin value. Additional problems include lack of stability and liquidity, poor transparency, and weak or ineffective marketing. Projects that run out of funds to support future development stagnate, which can also reduce value and make it difficult to realize on a masternode investment.

In masternode projects, users receive rewards in the form of coins for contributing to the network. At some point in the masternode project, there can be a significant imbalance in supply versus demand, causing a devaluation of the project. Because users are not buying coins at the same rate as these coins are being issued, users do not treat them as they would if supply and demand were more closely aligned. As a result, users end up selling these coins for anything because they view them as “free” coins. This is where problems crop up for other masternode projects.

THE ROCKET FUND SOLUTION

Rocket Fund takes a different approach, which solves many of the current problems that investors see in the space. Because Rocket Fund Blockchain allocates 10% of all rewards into a development fund, there is built-in stability and support for future growth in the project. A portion of the reserve is held in BTC should the need arise to strategically buy back coins and stabilize the market. This strategic reserve structure allows Rocket Fund to list on multiple exchanges, increasing the liquidity for the project and to fund strong marketing that fuels demand.

ROCKET FUND IN DETAIL

- **Budget**

Of every block, 90% goes to masternode holders and 10% to the reserve fund. With a guaranteed project budget, the Rocket Fund team can effectively pay for marketing and advertising, new exchanges, listing sites, and more.

- **Buy Back Program**

The buy back program is insurance for investors. Fifty percent of the reserve fund will go into BTC, which will act as a safety net for stability.

- **Inflation**

Rocket Fund's low supply of 10 million total coins was designed with scarcity in mind. As the project develops and moves into future stages of the reward structure, more coins will need to be locked up.

- **Further Development**

The strategic reserve structure of 10% ensures sufficient budget for future project development

- **Transparency**

The fund will be trackable and fully open to the public. All of the reserve BTC fund and RKT fund will be viewable on our website. Users will be able to access a daily live feed with exact information on Rocket Fund reserves.

SUMMARY

By taking a new approach to the masternode project space, Rocket Fund offers a game-changing opportunity for investors. As the Rocket Fund project progresses, its protective reserves will sustain demand and fund future investment. As a result, Rocket Fund is in a class of its own and will continue to provide value for its investors for the foreseeable future.

PHASE	BLOCK START	BLOCK END	COLLATERAL	REWARD	MASTERNODES	FUND
Phase 1	501	3,000	10	0.01	0.01	0.00
